

Truck Plus

TRUCK PLUS

A unique product developed specifically for the often complex and labor intensive process of monitoring and controlling trucks once they arrive or depart from the feed mill. Truck Plus incorporates Quality Control, Administration, Procurement, Stock Control and Traffic Control procedures

FEATURES :

- Provides a common platform for both incoming and outgoing trucks to be registered, processed and appropriate actions assigned.
- Information is instantly transmitted to multiple stations via internal communication network
- At the work station information is reviewed, captured and used for further decision making processes
- The movement of each truck is controlled and timed to and from each station as directed
- Bar code technology ensures the trucks follow the correct assigned destination while in the facility
- Provides for accurate loading of finished feeds or unloading of raw materials

BENEFITS :

- Increased transport turn-around time
- Provides security and transparency
- High level traceability
- Reduced manual entry, labour cost and paperwork
- Ensures accuracy of loaded or unloaded weights
- Maintains real time inventory
